

How to make images (grid cells) of the same height?

Eldhose**Feb 1**

Edit your css file as follows

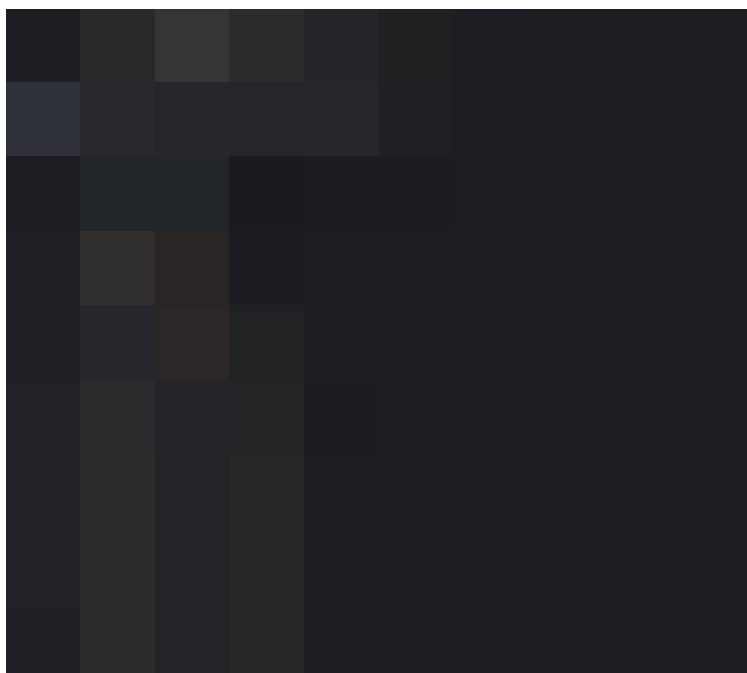

```
.image {  
width: 100%;  
height: 40vh;  
  
display: block;  
}
```

n0vum**Feb 1**

I tested this option on different screens. Yes, it turns out correctly, but only in one single case - on the screen 1014 1366. On the other screens it doesn't look good.

You want get it responsive.now i got your point! That part i didn't think.
Don't worry. We can sort it out. One more thing image will be too small in mobile phone screen if you want to reduce the size of image according to sreen width. Is that ok if image slide down according to the width of screen.
Now your image is

A A A

If it get slide down it will look like

A

A

A

For small view width sreen

For big view with sreen

Image look like

A A A

Is this okay?

Just represented image with Letter A

If you look at my media queries, you can see that I made this arrangement of images intentionally. This is the meaning of using the Grid system. The simplicity of changing the position of the cells attracted me. It seemed that there would be no problems with the size of the cell-images. But here a trap was waiting for me.

Eldhose

To make such arrangement no need of media query
grid-template-columns: repeat (auto-fill,minmax(60px,1fr))
grid-template-rows:1fr 1fr 1fr

Add this to image container class

That 60px you have to adjust with the require size you want

Refer free code camp challenge

<https://www.freecodecamp.org/learn/responsive-web-design/css-grid/create-flexible-layouts-using-auto-fit>

Eldhose:

1fr 1fr 1fr

Thanks!

I read about the minmax function. It seems very promising, but I don't understand how to apply it when placing **grids in the grid**.

What you wrote I put in my code, and nothing good came out again.

In addition, I use media queries so that on different screens the area of the img-div grid is located differently: on some screens above, on others - from the side. Here minmax will not help me, I guess.

try this in your system

two different approach for same solution.

```
<html>
<style>
.main div{
  display: inline-block;
}

@media (max-width:1200px) {
.main div{
  display: block;
}
}

</style>
<div class="main">
<div>

  <a href="#">
<div>

  <a href="#">
<div>

  <a href="#">

</div>

</html>
```

```
<style>
.main {
  display: grid;
  grid-template-columns: repeat(3,1fr);
  grid-template-rows: 1fr;
  grid-template-areas: "first second third";
}

.one{

  grid-area: first;
}

.two{
  grid-area: second;
}

.three{
  grid-area: third;
}

@media (max-width:1200px) {
  .main{
    grid-template-areas: "first" "second" "third";

  }

}

</style>
<div class="main">
<div class="one">

  <a href="#">
<div class="two">
```

```
<a href="#">

<div class="three">

  <a href="#">

</div>

</html>
```

I visited the codepen. felt like you remove the image. put the image link back. we can sort it out. actually I was logging from my mobile as i was traveling.

padunk

Feb 5

Image is annoying, because they are not like other elements.

Basically if you wrap the image on div or figure, make sure that you define the wrapper element width and height too.

I hope this codepen sample help: <https://codepen.io/padunk/pen/QWbLZrG?editors=1100>

Feb 5

Hello!

Thanks. I've already set up adaptability.

The whole problem was only in the height of the image that covers the grid. I had to take all three photos of the same size in another editor. These are crutches.
